

Young children are naturally curious about nature and living things.

Positive and frequent experiences with nature during the early years can help them develop a lifelong sense of love and appreciation for the environment. A caregiver's interest and enjoyment of the natural world is also important in fostering excitement and deepening children's understanding.

Help support your child's innate sense of awe and wonder about nature by growing a garden together! Learn about what a plant needs to live and grow, where food comes from, and how we need nature and nature needs us. Have fun exploring using all of your senses as you take care of your plant and observe how it changes everyday.

Color in Elmo and his friends gardening.
How many plants are they growing?

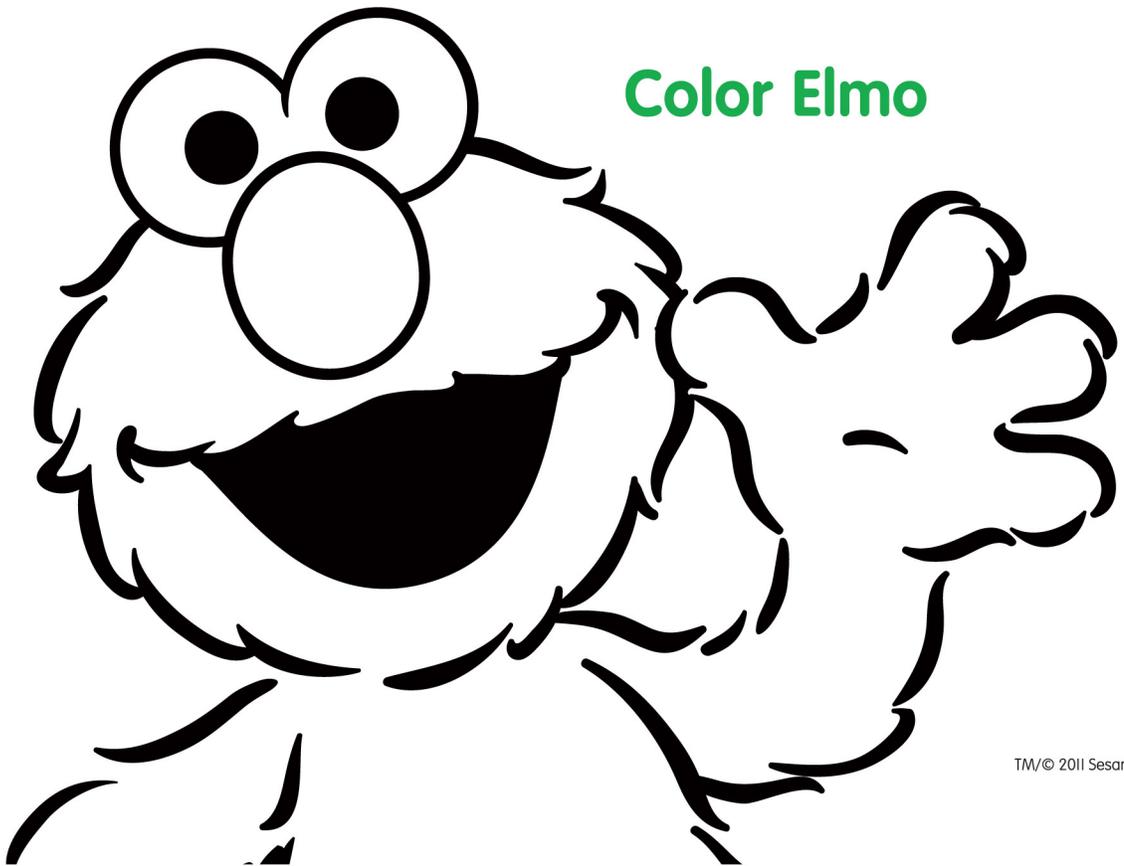

What Comes Next?

Help Elmo figure out which flower or plant comes next in the pattern. Draw it in!
